

Mitsubu 16:

• $P^{(l)}$ obogeni πιστ. Gegen l

• $H^{(l)} \leq P^{(l)}$ αρνητικα σε πιστ.

• $\tilde{H}^{(l)} = \left\{ P|_{S^2} \mid P \in H^{(l)} \right\}$. νε

$$\dim \tilde{H}^{(l)} = \dim H^{(l)} = 2l+1.$$

• $\mathcal{L}^2(S^2) = \bigoplus_{l=1}^{\infty} \tilde{H}^{(l)}$ και

Fix καιδε: $D_{S^2}(r) = -(l+1)r$

$r \in \tilde{H}^{(0)}$

Πιστωση: Fix καιδε $l \geq 2$

$$P^{(l)} = A^{(l)} \oplus r^2 P^{(l-2)}$$

Απόστρηση: Γυωπίζουνε οι

$$\dim P^{(l)} = \frac{(l+1)(l+2)}{2} \text{ και}$$

$$\dim H^{(l)} = 2l+1$$

$$\dim \mathcal{P}^{(l)} = \frac{(l+1)(l+2)}{2} = \dim H^{(l)} + \underbrace{\dim r^2 \mathcal{P}}_{\frac{l(l-1)}{2}}$$

Upd. aus $\mathcal{H}^{(l)}$: $r^2 \mathcal{P}^{(l-2)} = 0$.

Caractere von Euler

$$x_1 \frac{\partial \underline{P}}{\partial x_1} + x_2 \frac{\partial \underline{P}}{\partial x_2} + x_3 \frac{\partial \underline{P}}{\partial x_3} = b \underline{P}$$

Fixe $a \in \mathcal{P} \subset \mathcal{P}^{(l)}$.

$$\Delta(r^{2k}\underline{P}) = 2k(2l+2k+1)r^{\underline{P}} + r^{2k}\Delta\underline{P}.$$

$b \in \mathbb{R}$ fixiert, $\forall k \geq 0$. \star

Fixe $\underline{P} \in H^{(l)}$, erw. $k \geq 0$ u.a.
 Daraus folgt $\alpha \in \mathcal{P}^{(l-2k)}$ s.w. $\underline{P} = r^{\underline{a}}$
 $b \in \mathcal{A} \subset \mathcal{P}^{(l-2k)}$.

$$\star \quad b = 2k(2l+2k+1)r^{\underline{a}} + r^{2k}\Delta \underline{a}.$$

$$\rightarrow \Delta a \frac{r^{2(1_k+1)}}{2k(2k-2l-1)} = r^{2k} a = P$$
