

ΑΝΔΡΟΓΟΝΑ

testosterone

5- α -dihydrotestosterone

testosterone

estradiol

5 α -androstenedione

androstenedione

estrone

androsterone

5 β -androstenedione

etiocholanolone

dehydroepiandrosterone

testosterone

testosterone

17- α -methyltestosterone

Ανάλογη ανδρογόνος/αναβολική δράση
προς testosterone

oxymesterone

oxymetholone

methandrostenolone

3πλάσια αναβολική και 1/2 ανδρογόνος δράση
από testosterone

Πολλαπλάσια αναβολική δράση από
testosterone και χαμηλή ανδρογόνος,
αλλά....και οιστρογόνος δράση!!

dehydroepiandrosterone

methyltestosterone

methandrostenolone

mestanolone

fluoxymesterone

oxandrolone

stanozolol

danazol

Αναστέλλει την έκκριση γοναδοτροπινών παρουσιάζει:
 ασθενή ανδρογόνο/αναβολική δράση
 μηδενική οιστρογόνο και ασθενή προγεστογόνο
 Χρησιμοποιείται στην ενδομητρίωση (μείωση επιπέδων οιστρογόνων)

methenolone acetate

chlortestosterone acetate

19-nortestosterone

norethandrolone

ethylestrenol

19-nortestosterone

ethylestrenol

testolactone

Ασθενές αναβολικό, με πολύ ασθενή ανδρογόνο δράση.
Καταστέλλει τη λειτουργία των ωοθηκών και ελαττώνει τα επίπεδα οιστρογόνων
δρώντας ως μη αντιστρεπτός αναστολέας της αρωματάσης.
Χρησιμοποιείται ως αντινεοπλασματικό (καρκίνος μαστού) και λαμβάνεται από
το στόμα, αλλά και παρεντερικά.

Selective Androgen Receptor Modulators

- ανταγωνιστές ή μερικοί αγωνιστές στα προστατικά κύτταρα
- αγωνιστές στα οστά και τους μύες

Δεν αποτελούν υποστρώματα της αρωματάσης, ή της 5α-αναγωγάσης

ΑΝΤΙΑΝΔΡΟΓΟΝΑ που συνδέονται με τον υποδοχέα ανδρογόνων

α) στεροειδή

cyproterone acetate

oxendolone

WIN49,596

Δρά επίσης στους υποδοχείς του ΚΝΣ
αναστέλλοντας τη σύνθεση γοναδοτροπινών

β) μη στεροειδή

X= H, flutamide

X= OH

Τα αντιανδρογόνα της κατηγορίας (στεροειδή και μη)
είναι ιδιαίτερα χρήσιμα στην αντιμετώπιση των
αρχικών σταδίων του καρκίνου του προστάτη.

ΑΝΑΣΤΟΛΕΙΣ ΤΗΣ ΒΙΟΣΥΝΘΕΣΗΣ ΤΩΝ ΑΝΔΡΟΓΟΝΩΝ

medrogesterone

finasteride

Χρησιμοποιούνται στην
αντιμετώπιση της καλοήθους
υπερπλασίας του προστάτη

Αναστολείς της 5 α -reductase

MDL 27,302

liarozole

Χρησιμοποιούνται στην
αντιμετώπιση μεταστατικού
καρκίνου του προστάτη

Αναστολείς της 17 α -hydroxylase/17,20 lyase

17 α -hydroxypregnenolone
